GF Machining Solutions

When all you need is everything, it's good to know that there is one company that you can count on to deliver complete solutions and services. From unmatched Electrical Discharge Machining (EDM), Laser texturing, Laser micromachining, Additive Manufacturing and first-class Milling and Spindles to Tooling and Automation, all of our solutions are backed by unrivaled customer service and expert GF Machining Solutions training. Our AgieCharmilles, Microlution, Mikron Mill, Liechti, Step-Tec and System 3R technologies help you raise your game—and our digital business solutions for intelligent manufacturing, offering embedded expertise and optimized production processes across all industries, increase your competitive edge.

 We are Mikron Mill.

We are GF Machining Solutions.

The Mikron MILL P 500 U / 800 U are 5-Axis high performance machines for both precision part manufacturers active in the aerospace, machinery and defence industries, general mechanic industries and precision mold makers active in industries such as automotive and home appliance.

Market segments and applications

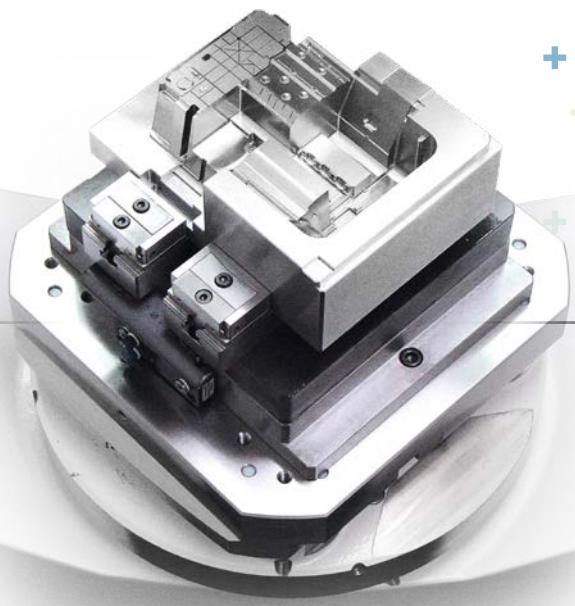

Mold and Die

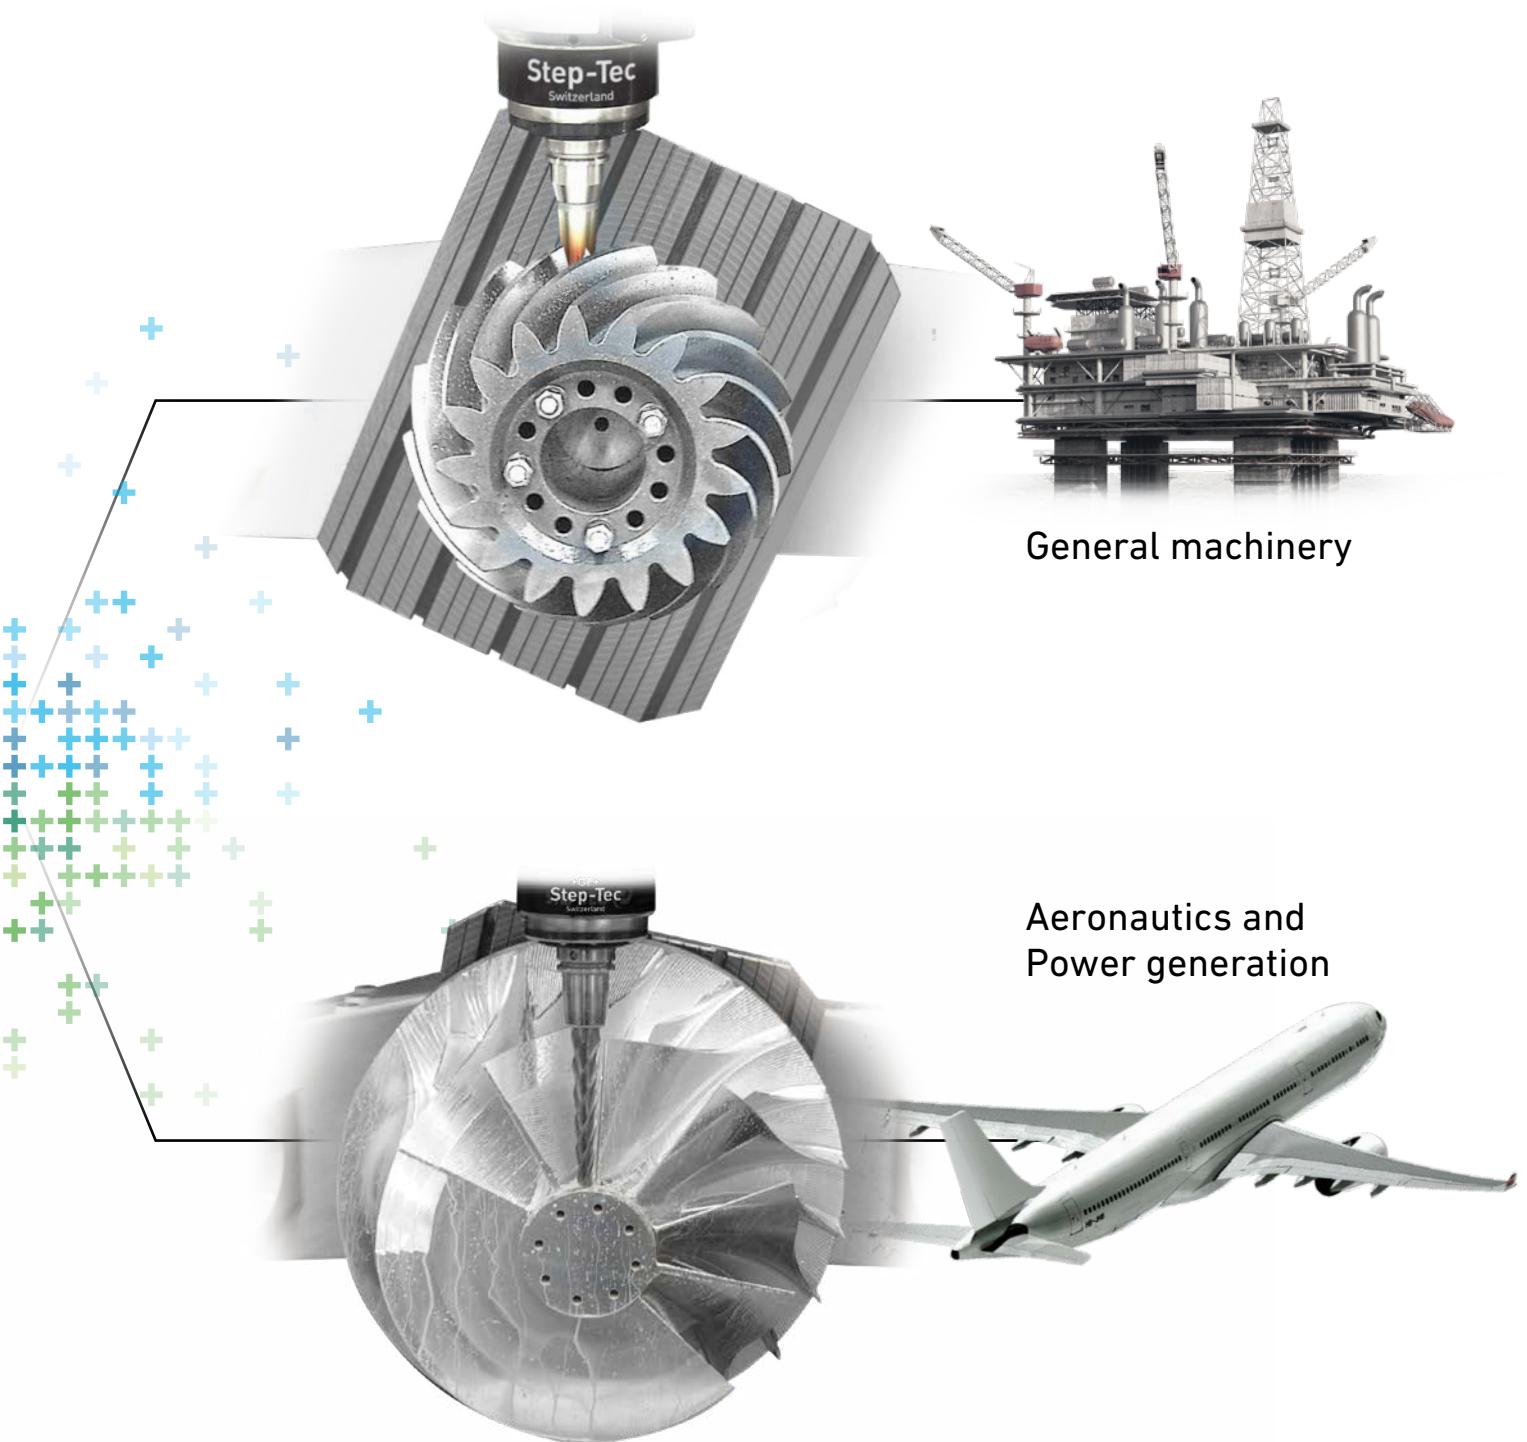

Automotive

Home appliances

Part production

High-Performance Milling: Powerful parts and tools machining

- ⊕ High material removal rate
- ⊕ Performant with tough materials
- ⊕ Dynamic Milling of heavy duty parts
- ⊕ Meant for productive purpose
- ⊕ Heavy load possibility up to 1,000 kg

**Accurate parts achieved
with dynamic performance**

Solutions

Productive and accurate machining of parts up to 1000 kg

- + Gantry concept with shortest force flow which results in outstanding machining stability
- + Solid, vibration-damping machine bed
- + Thermo-symmetrical design and water-cooled components for long-term accuracy
- + Extremely compact construction
- + Big work area with user-friendly access
- + Step-Tec Spindle with powerful and flexible power/speed range characteristics
- + Wide range of compact tool magazines
- + Machine and Spindle Protection (MSP) along all axis
- + Integrated or third-party Automation in smallest footprint
- + Heidenhain control enhanced by GF's smart machine
- + Integral connectivity opening the path to Internet of Things integrations
- + Ready for modular digital services

Machine and Spindle Protection

The world's only Spindle protection that works in all directions

Collisions usually occur when a new computer numerical control (CNC) program is first executed. MSP offers the best security for this.

How it works

The Spindle is deflected when the force acting on the tool during a collision would damage the Spindle bearing. With this deflection, the axis drives gain the space required for automatic emergency braking. Braking distance depends on travel speed and is allowed within the clearance gained. Thus, damage-free braking is made possible up to 12 m/min. MSP works regardless of direction and with no impact on machining speed in most materials.

Use the M-function M304 to simply run the machine within the safe speed limits (e.g., first run of a machining program): up to 12 m/min. along X, Y, Z linear axes and up to 2,250°/min. respectively 3,150°/min along A- resp. C-rotary Axis. After it has successfully run through the process, the fast feed rate limitation can be disabled with M305.

The protection is always active even if the machine runs faster than 12 m/min., and the maintenance-free MSP system works without wear.

With the M304 function activated, the Spindle is damage-free during a tool or toolholder collision, and all crash events. M304/M305 events are duly recorded within the CNC.

Statements

Insurances company:
"In a machine lifetime there are in average 2-3 spindle crashes."

Finance department:
"The investment into MSP is paid off already with the first spindle crash."

Relaxed operators:
"It really works."

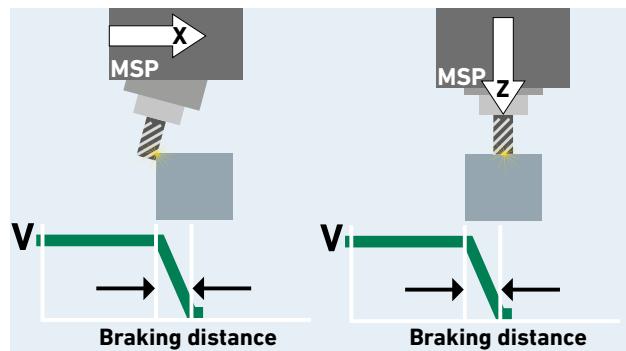

- Protected machine geometry
- Reduced machine downtime
- Full cost control
- Reduced machine-breakage insurance premium
- To restart after crash only 10 min production interruption

Facts

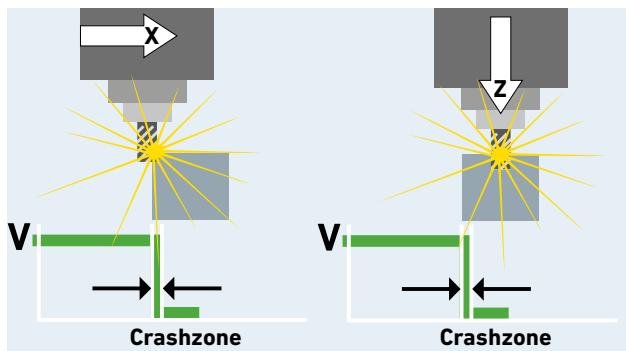

- + The protection is always active
- + Available on 20,000 min⁻¹ Spindle
- + Unlimited roughing performance
- + M304/305 safety speed limit
 - X/Y/Z axes up to 12 m/min./472 in/min
 - C axis up to 3,150°/min. (8.75 min⁻¹)
 - A axis up to 2,250°/min. (6.25 min⁻¹)

Crash protection by MSP

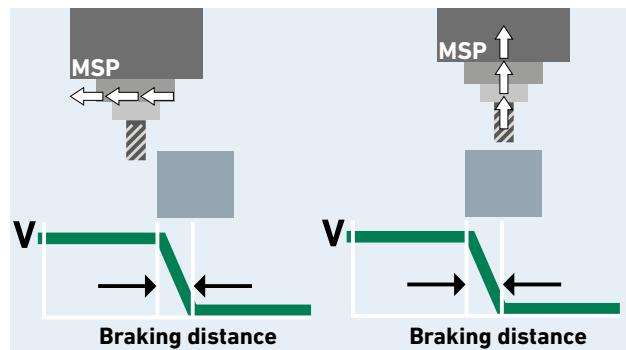

Machine and Spindle Protection in every direction

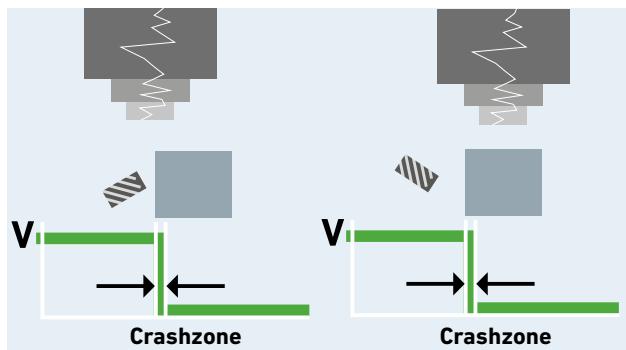

Crash

Software-supported tool retracting

Spindle crash without braking activity

Verify geometrical accuracy with KinematicsOpt or other tools

- + Same Spindle without repairs
- + Without machine realignment
- + Without machine downtime

- Spindle damaged
- Machine geometry misaligned
- Machine downtime
- Significant costs

This part was machined after 200 crashes

A photograph of a machined metal part, likely an end mill, showing significant surface damage and wear. The part has a complex, curved profile with visible machining marks and a rough texture, indicating it was machined after 200 crashes.

9 Mikron MILL P 500 U / 800 U

Enhance your process beyond program and machine setup

This includes a range of modules that are collectively referred to under the generic term "smart machine" and that fulfil various functions. For the Milling process to become intelligent, it must:

- ... establish comprehensive communication between man and machine, which makes available precise information that the operator requires to assess the Milling process.
- ... support the operator in the optimization of the process, which considerably improves the performance.
- ... optimize the Milling process, which improves process safety and workpiece quality—especially important in unmanned operation.

smart machine construction kit system

Each of the modules fulfills a specific task. Just like in a construction kit, the user can select the modules that fits best to improve his process.

The facts

- + Greater accuracy in shorter machining times
- + Increase in the workpiece surface quality as well as the surface and shape accuracy
- + Recognition of critical machining strategies
- + Improved process safety
- + Higher availability
- + Better operating comfort
- + Considerable increase in reliability in unmanned operation

- Produce your workpieces in a process-secure and precise manner
- Increase reliability in unmanned operation
- Boost the service life of the machine
- Significantly reduce production costs

Precision

ITC, OSS and KinematicsOpt support the precise base of your machining center to reach an even more precise final part down to 2 µm.

Protection

MSP, PFP or ISM protect and extend the lifetime of your machine and tools.

Time

OSS, ISM and software tools such as rConnect boost your productivity. OSS Extreme = Up to 24% faster with improved surface finish and accuracy.

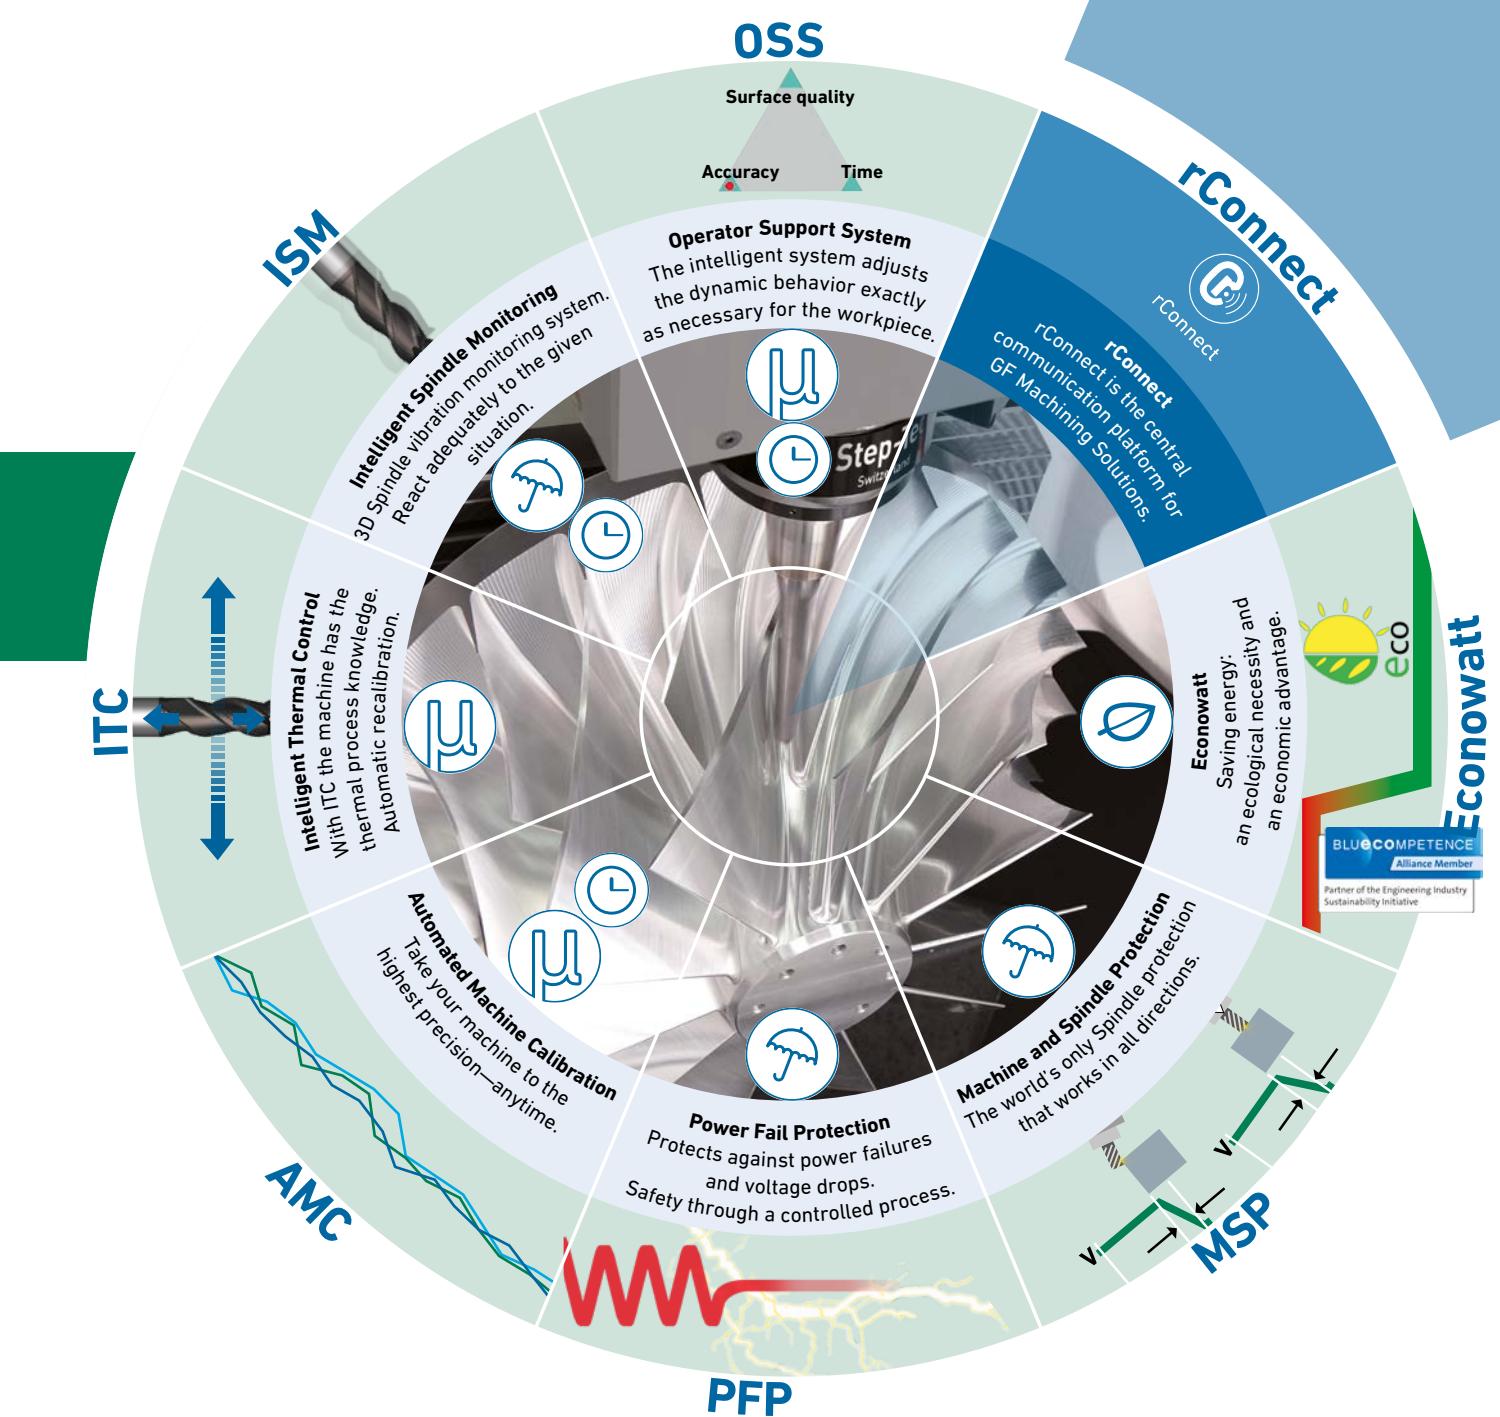

Saving energy

Econowatt saving up to 50% energy, is a ecological necessity with attractive economic advantages.

Also available in Heidenhain

KinematicsOpt, Power Fail Protection (PFP), Adaptive Feed Control (AFC), DXF file import, DNC remote network access on control

Simply better results with the smart machine

Accuracy and productivity from base machine

The benchmark for precision machining and agile productivity

+ **±2 µm**
precision in X/Y plane

Constant dimensional precision and 24/7 process reliability

+ **365 days per year flexibility**

Dynamic machining and broad performance versatility

+ **~10 minutes to resume full produciton**

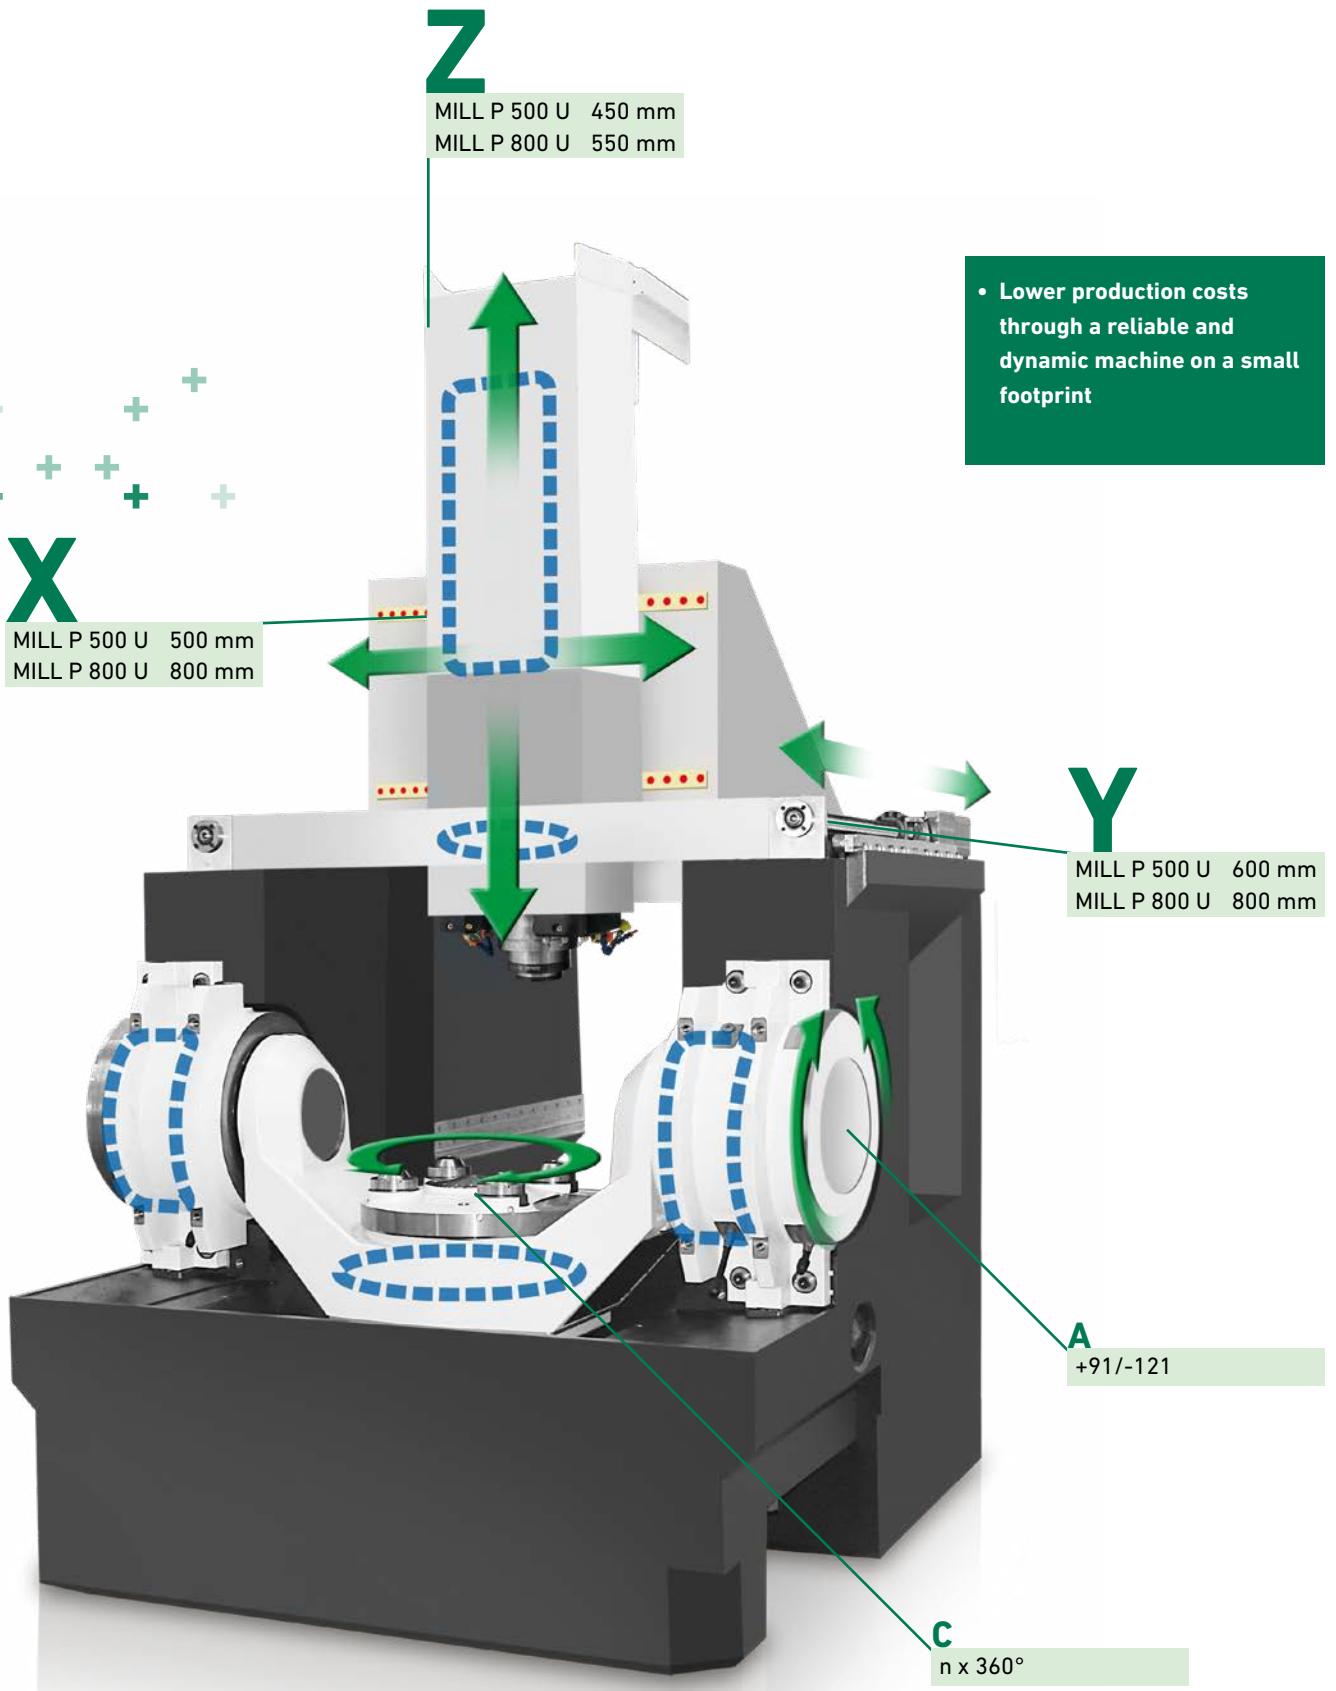

after a crash thanks to Machine and Spindle Protection (MSP)

+ **250 percent higher productivity**

Increased profit thanks to integrated Automation

+ **Your most competitive business center**

Automation

Automated pallet handling: ideal accessibility to the workpiece

The Mikron MILL P 500 U / 800 U machines have been designed to accommodate automated pallet handling.

In the loading station, the raw parts are set up on the pallet while the machine is machining the workpiece on the other pallet.

This greatly increases the productivity of the machine.

- + Very good access to the workpiece
- + The pallets in the loading station can be manually rotated 360 degrees.

- Small footprint
- 24/7 production
- Efficient machining for highest productivity
- Best total cost of integration and ownership

To increase your autonomy, there are very compact pallet magazines available which can be loaded with up to 12 pallets with optimal ergonomics.

- + With every Automation solution the pallets can be loaded up to 500/600 kg
- + Multiple workpieces in the pallet magazine require multiple tools
- + The three pallet dimensions are available with thread holes
- + Additionally, the sizes 500 x 630 mm and 500 x 500 mm come with T-slots
- + Optionally, the pallet in the loading station can be hydraulically raised for manual rotation
- + 30 to 245 tools can be selected with this scalable solution

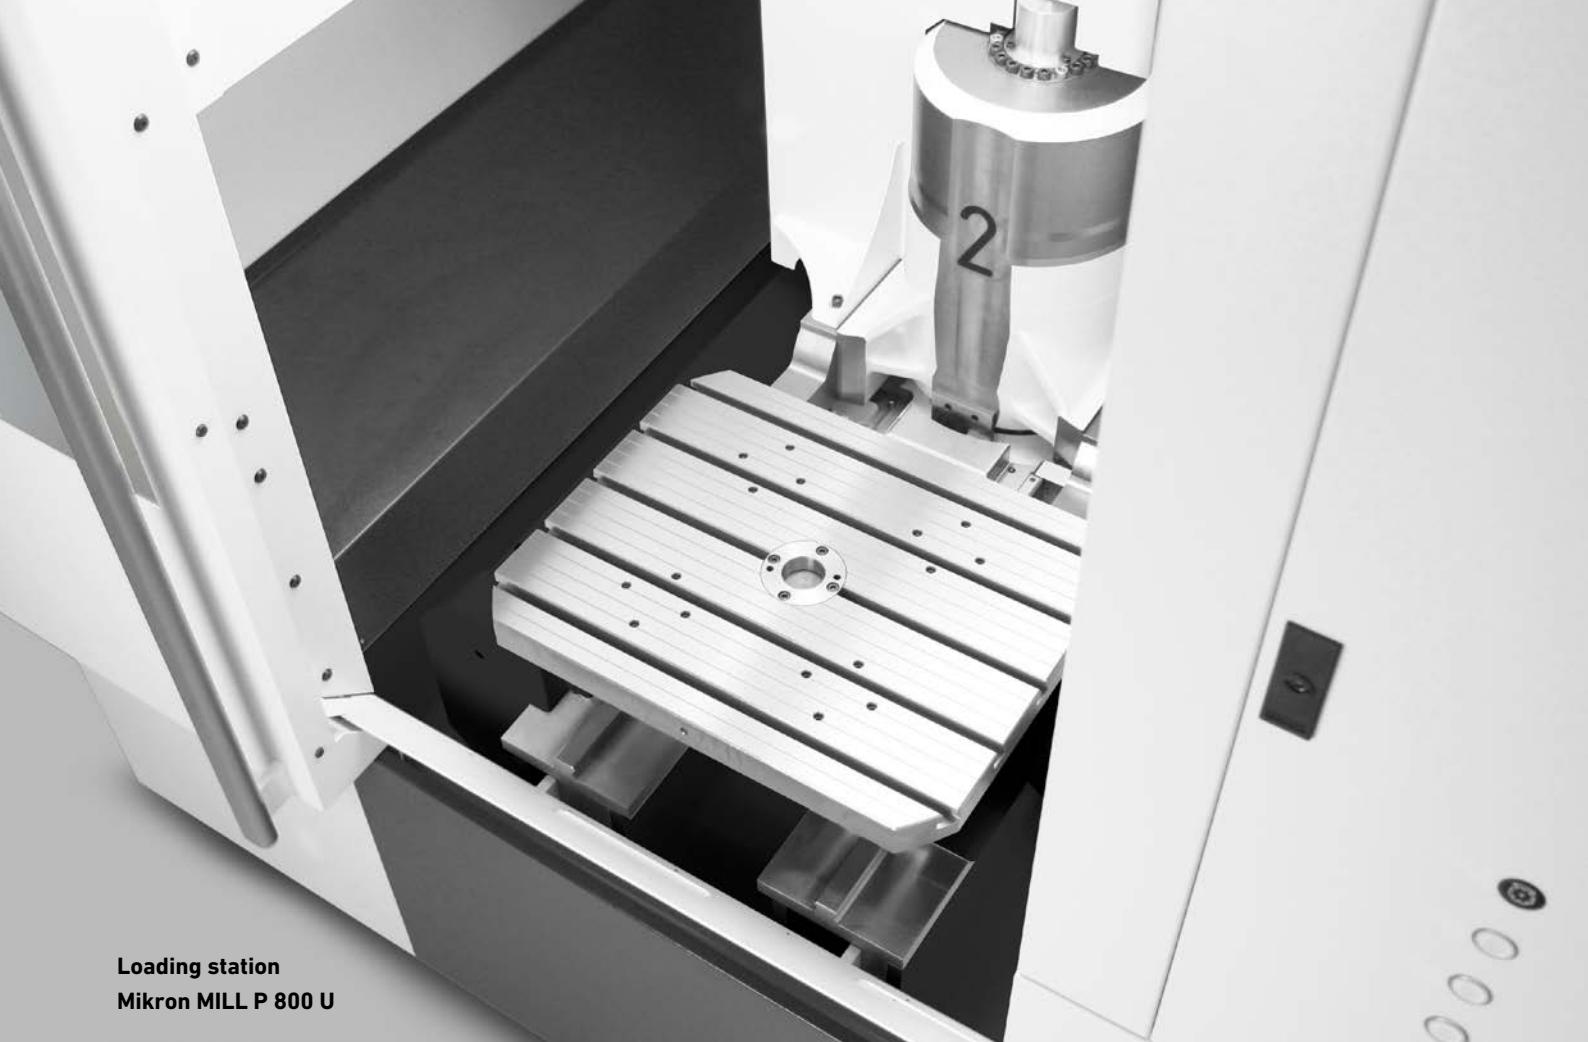

Standardized robot interface

The Mikron Mikron MILL P 500 U / 800 U can be linked to System 3R robot systems as well as operated with robot systems from other well-known suppliers.

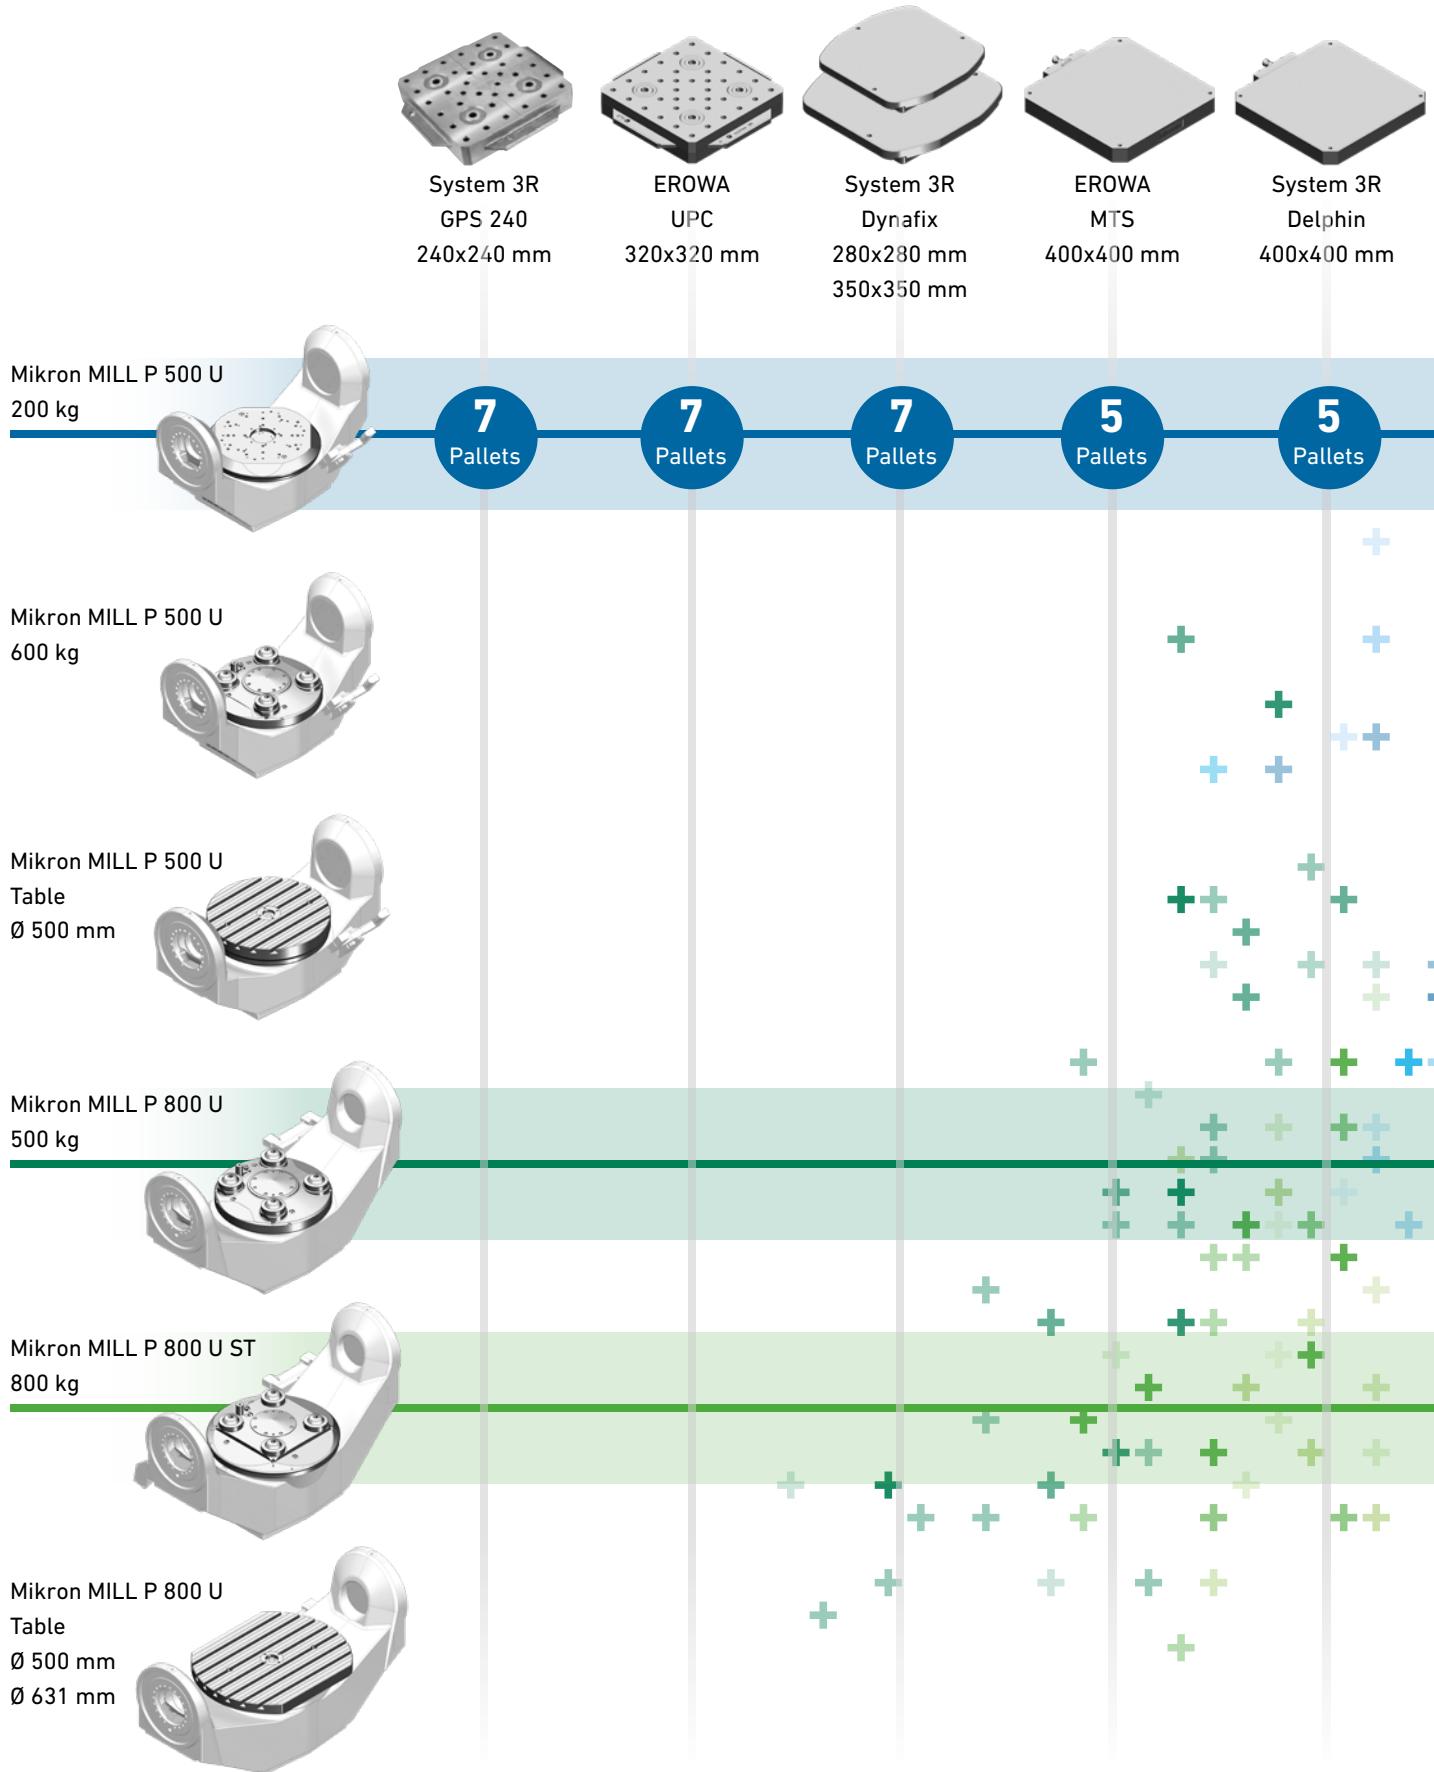

Regardless of the handling system used, the machine offers comfortable accessibility when integrated into a line.

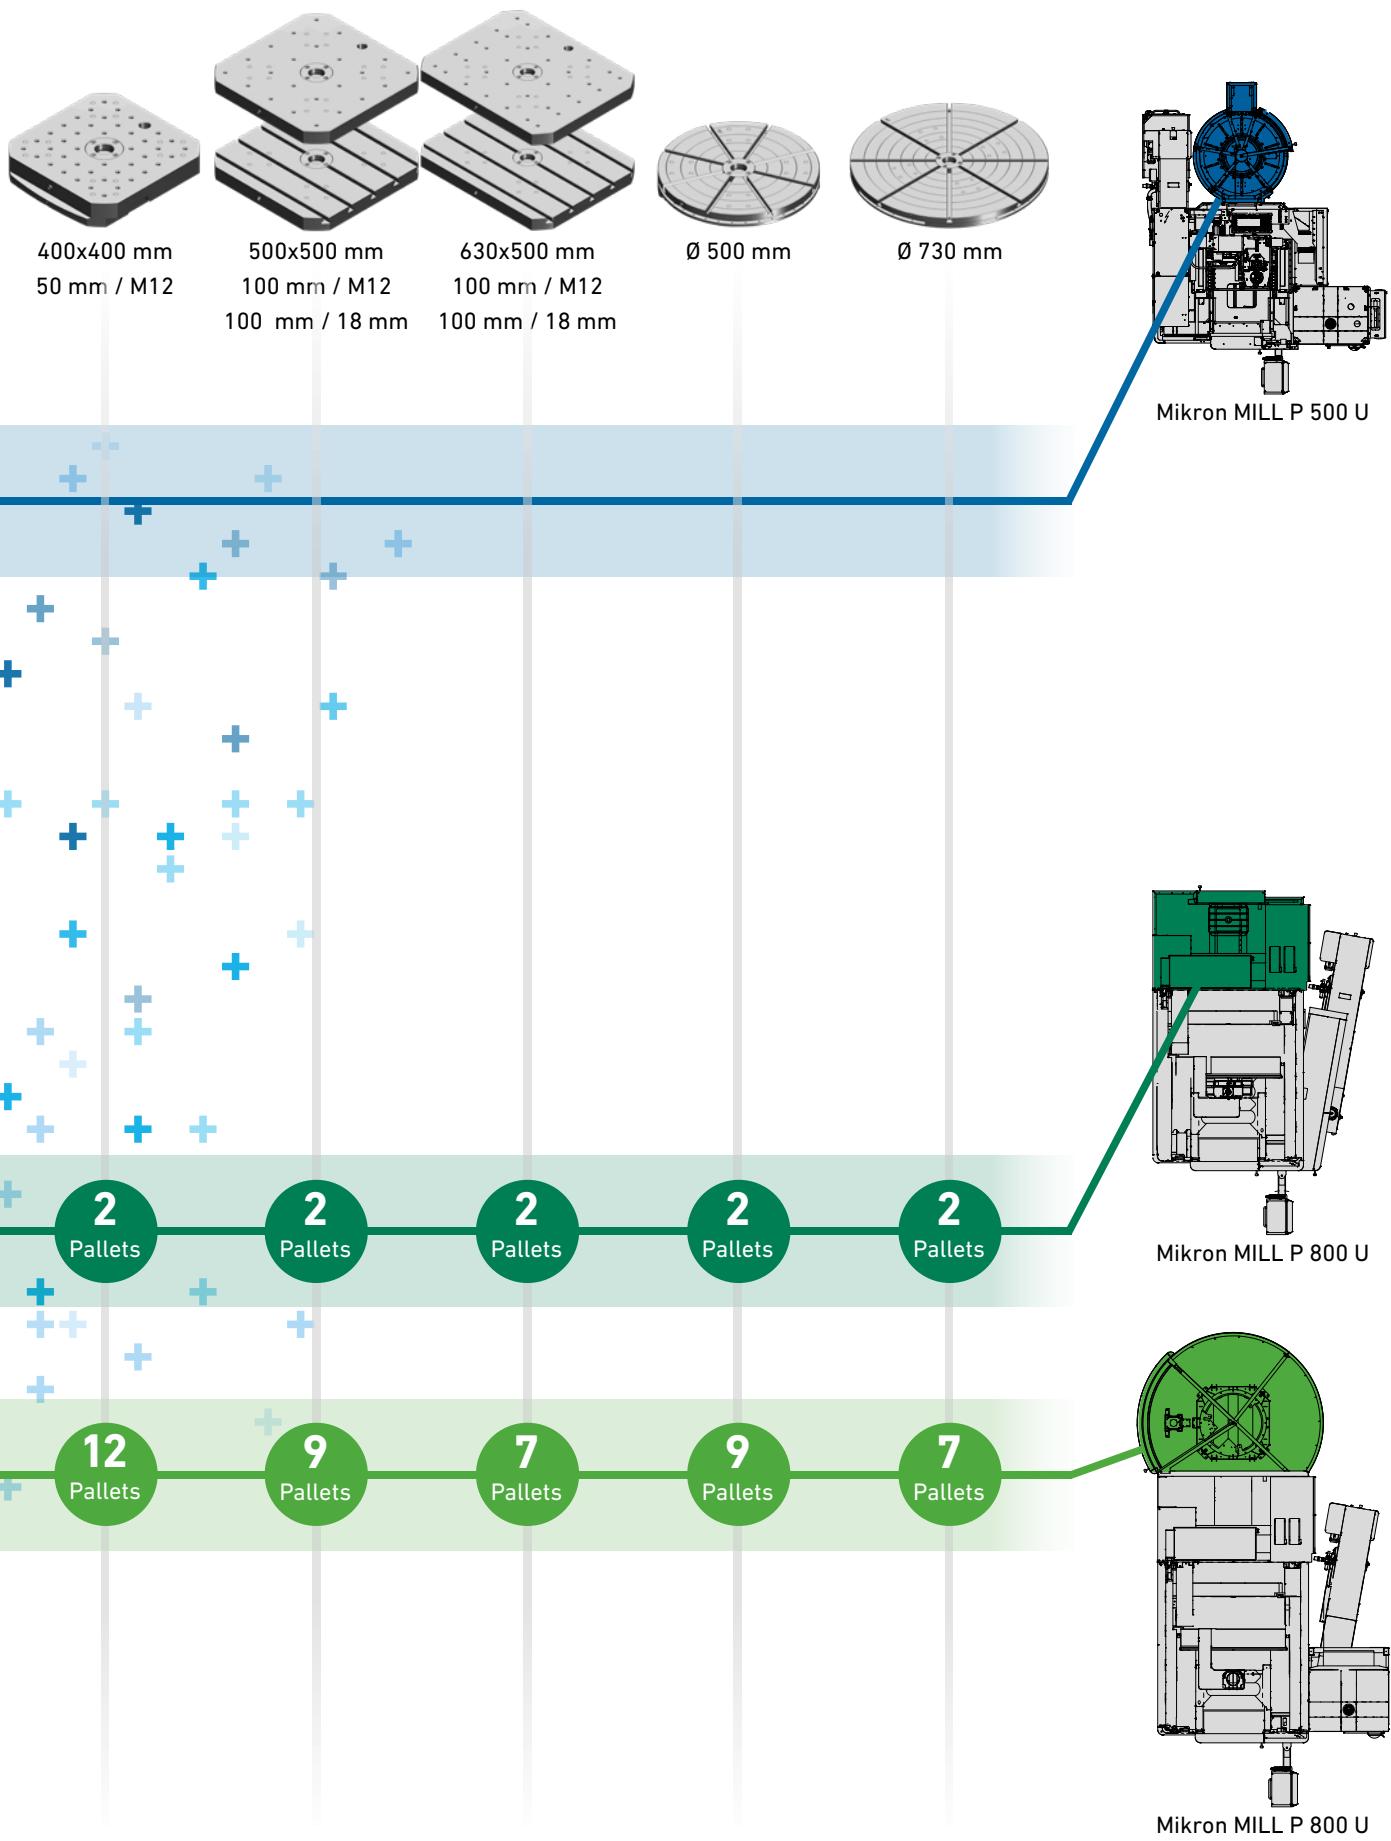

Direct robot loading

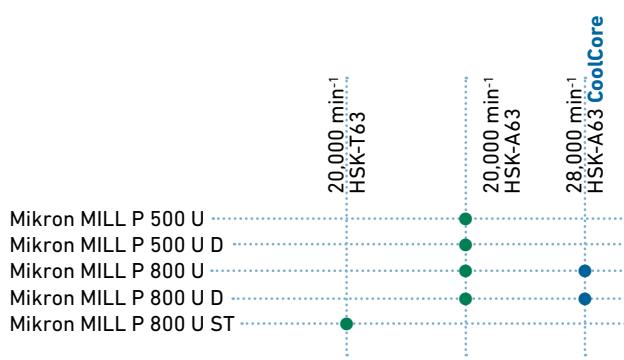

As flexible as needed

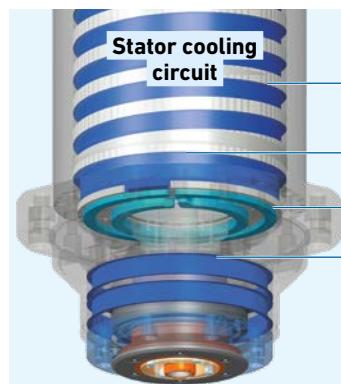

Tool Spindles for demanding machining

OptiCool

Step-Tec's OptiCool Spindle series ensures not only that the Spindle remains thermally stable, but that natural heat transfer to the Spindle support (e.g., Z-Axis) is limited to the lowest amount possible, in order to preserve the machine's geometry.

OptiCool

Best polar thermal balance around the surface contacting the machine support

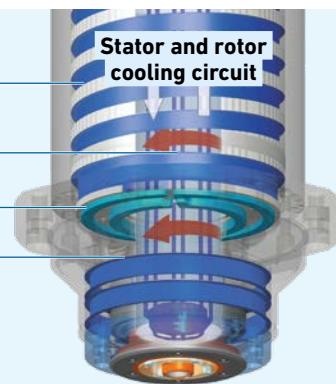

Ultra high-precision ceramic hybrid bearings

Heat barrier

Frontal cooling

Highest precision due to optimized thermal balance of the entire machining head

Satisfies the toughest requirements in surface finish, repeatability and reliability

CoolCore

20,000 min⁻¹ / HSK-A63

- + Precise high-performance
- + Available with or without internal coolant supply
- + Compressed air blow through Spindle

28,000 min⁻¹ / HSK-A63

- + Water-cooled rotor shaft (CoolCore) which stabilizes the temperature and consequently the expansion in the rotor shaft
- + Very accurate machining, because it minimizes thermal influences of the Spindle
- + Through-tool coolant is an available option

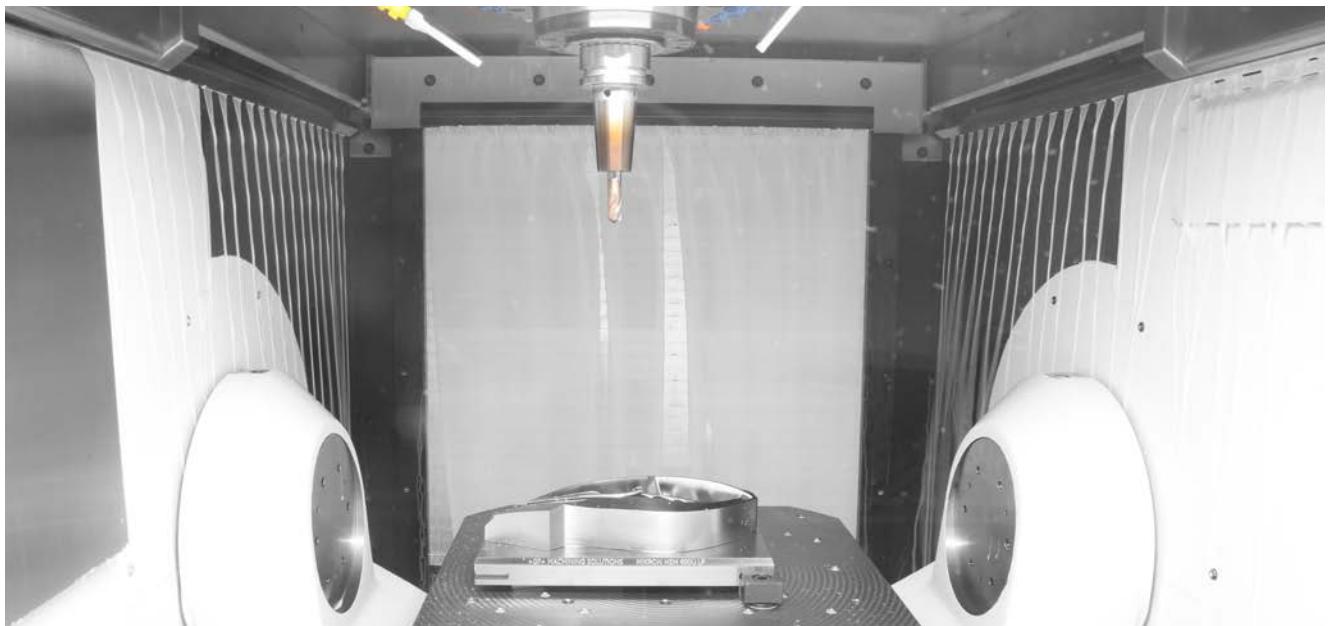

Additional advantages of CoolCore

- + Cooled shaft reduces the natural thermal shaft growth by half
- + Greatest thermostability and highest precision due to lower temperature fluctuations down to the tool tip
- + Significant reduction of thermal recovery time resulting in a productivity gain

• The Spindle is the heart of our machines.
Beyond Step-Tec Spindle performance, we ensure a comprehensive set of services and maintenance options. Ask us.
Check our website: www.step-tec.com

Chip management

Clean machining, wet or dry

Optimum chip clearance due to steep, smooth cabin walls.
Washer jets prevent chip accumulation.

- Reliable production process through a trouble-free chip flow

Adapted chip management

- + Solution for high-volume aluminum Milling chips.
With slat band lift-up chip conveyor and coolant unit with fine filtration
- + Solution for high-volume steel Milling chips with scraper lift-up chip conveyor and coolant filtration unit

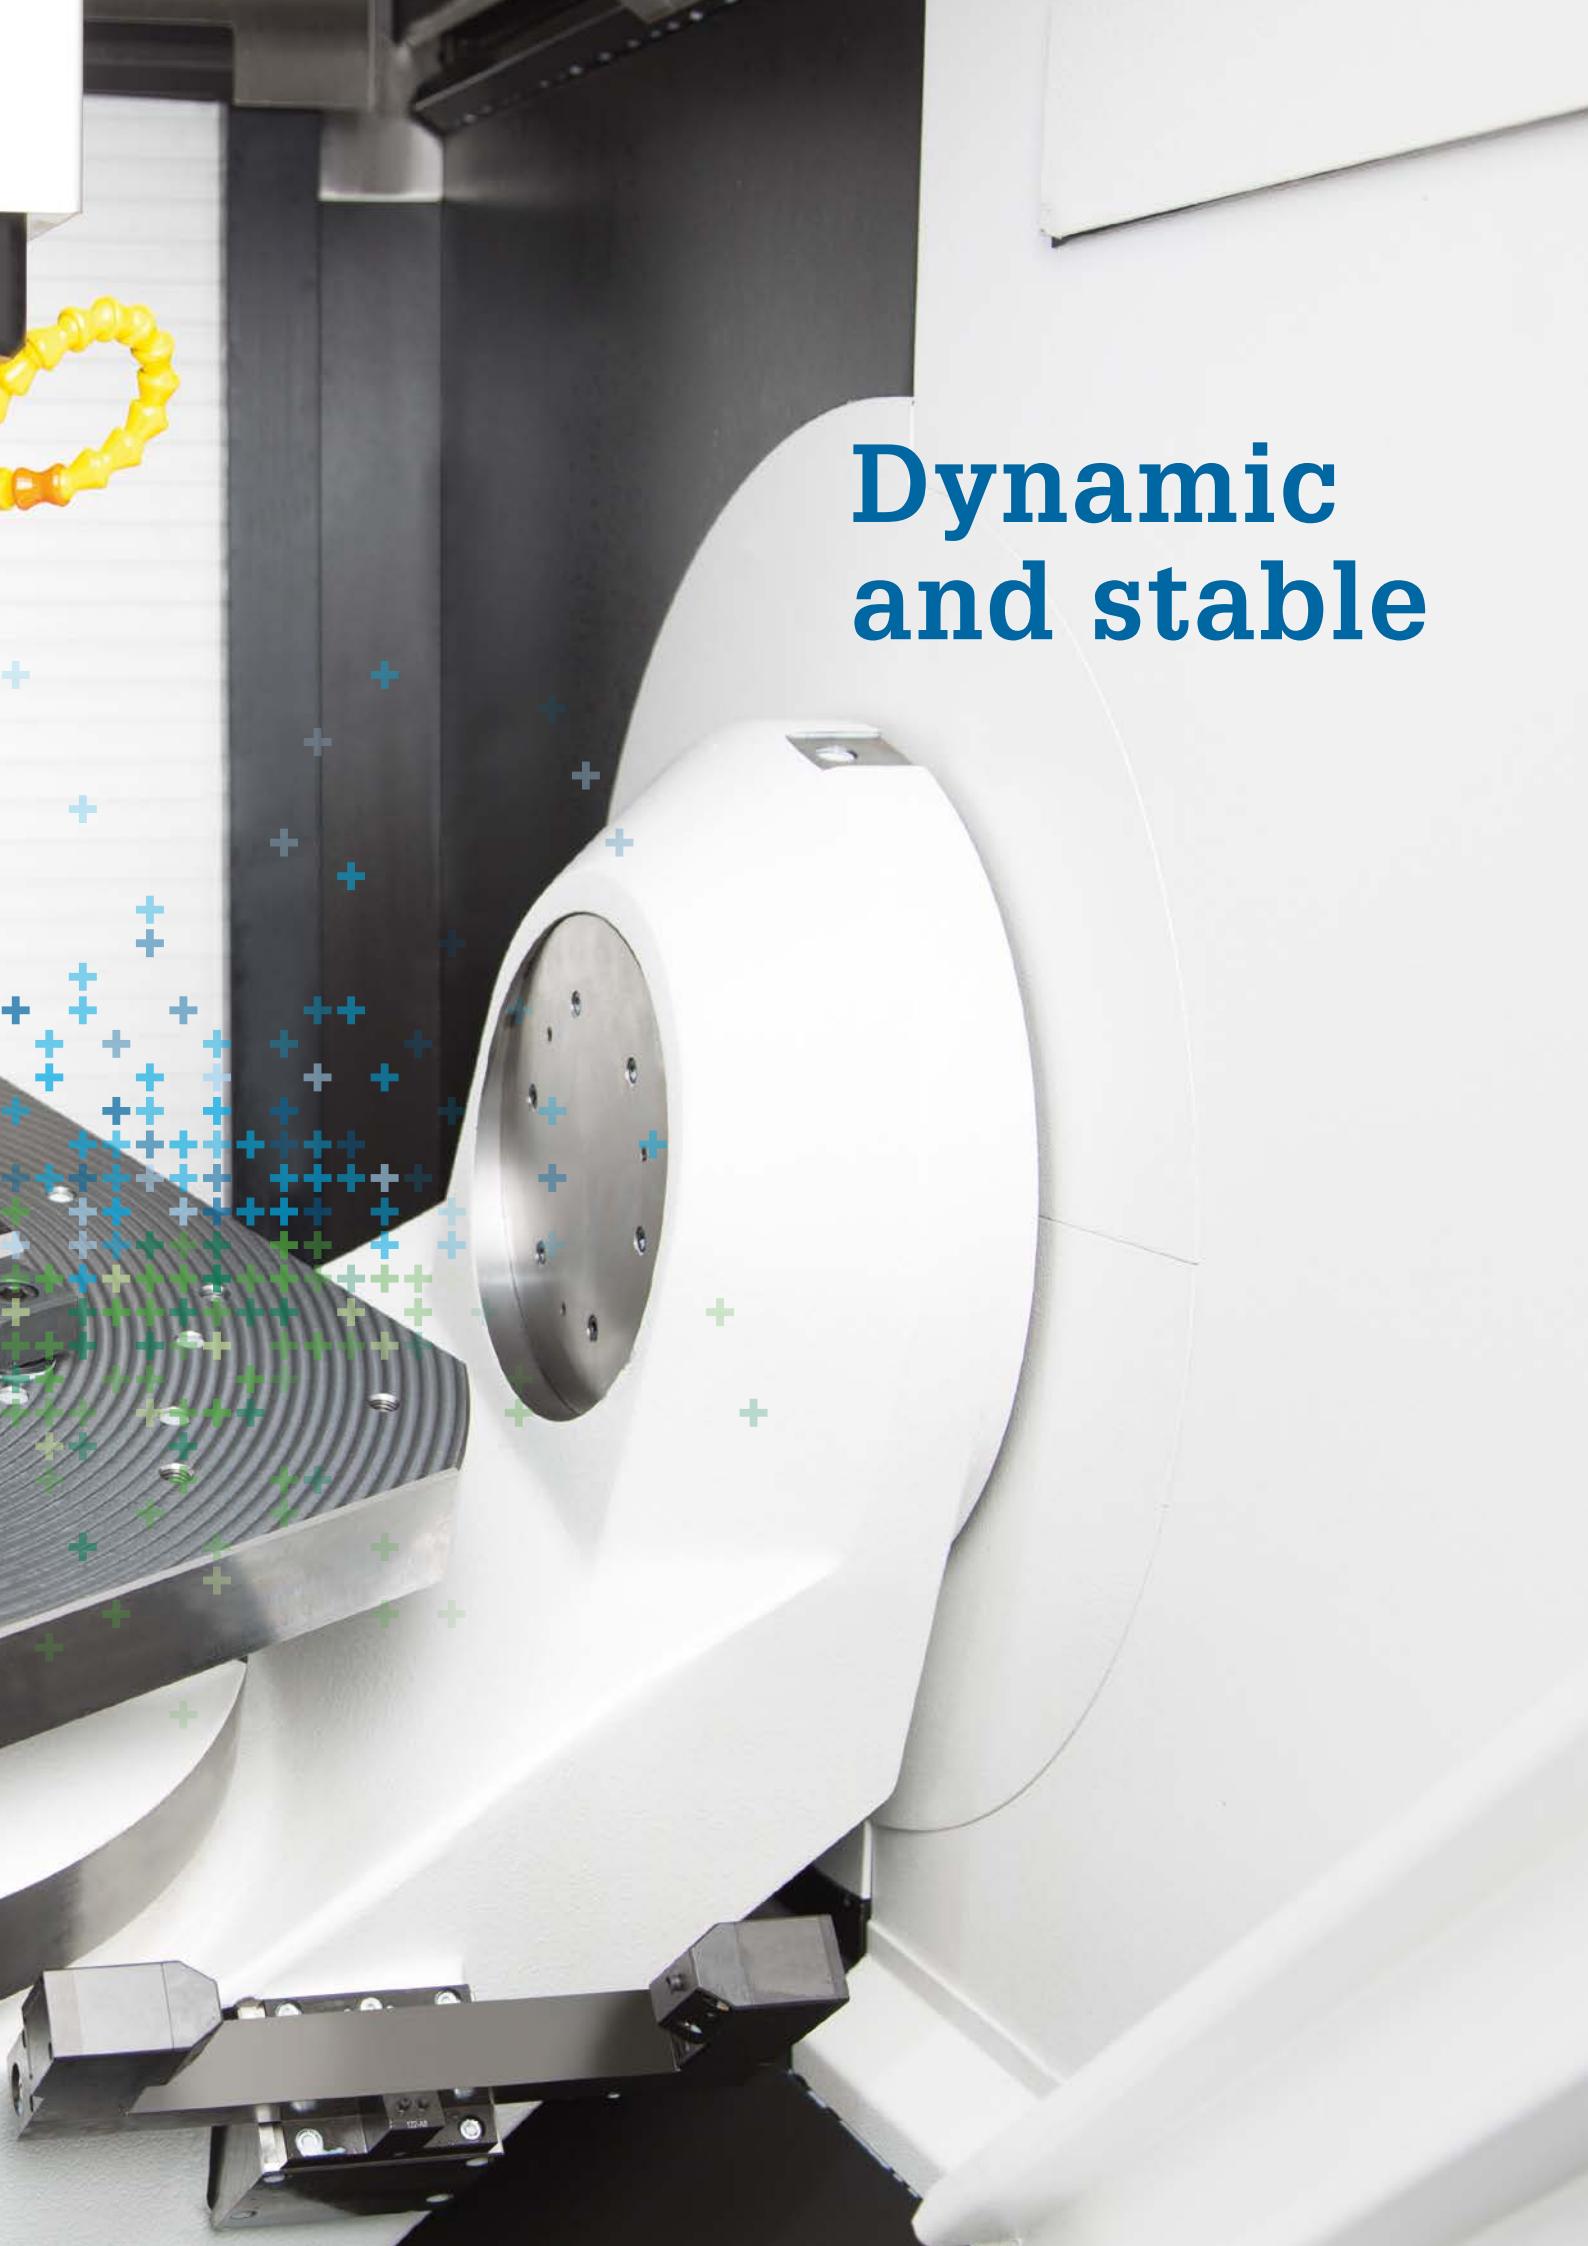

Options

- + Through-Spindle coolant
- + Wash down system
- + Coolant thermal control
- + Oil skimmer

**Load
parts
up to
1'000 kg**

**Dynamic
and stable**

Easy to use

Tool magazines

Rapid tool provision

30 tools

60 tools

120 / 170 / 215 / 245 tools

- Better overview allows faster preparation and maintenance
- Whatever your requirement, the most suitable tool magazine is available

All tools visible

Tools are visible through a window on the front of the magazine. Damaged tools can be quickly identified and replaced. If tools are required on other machines, you can see straight away where each tool is.

Smooth and swift

The magazine chain (60 tools) is moved and positioned by a controlled drive. The tools therefore glide swiftly and smoothly to the changing position. This means that tools can be made available much more quickly.

Vibrations that could have a negative impact on the Milling process are also prevented.

HSK-A63

- + Up to 80/160 mm diameter (depending on magazine type)
- + Max. length 350 mm

+GF+
Step-Tec
Switzerland

All-in-one, ready-to-use package

Because precision is not an option at GF Machining Solutions, we offer AMC as a standard:

- AMC software: cycle for Heidenhain TNC 640
- AMC hardware: pallet calibration
(with steel square and calibration ball)
- AMC interface: ergonomic interface
for easy, fast use

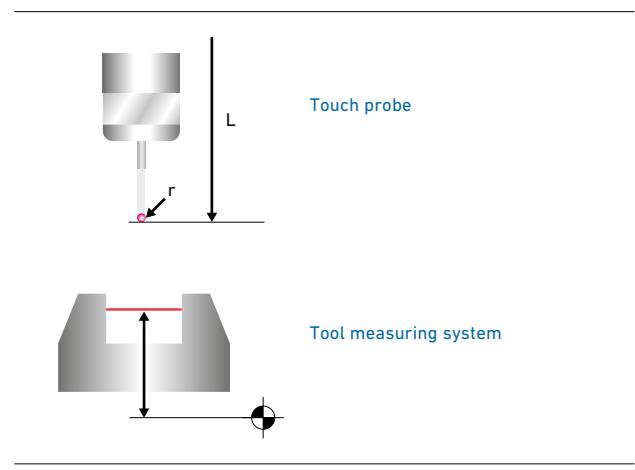

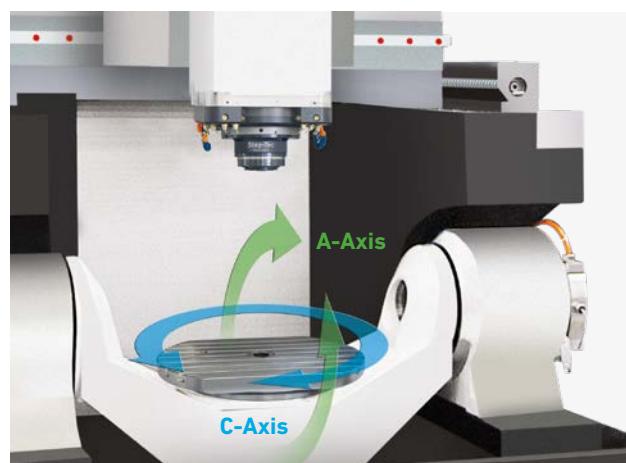

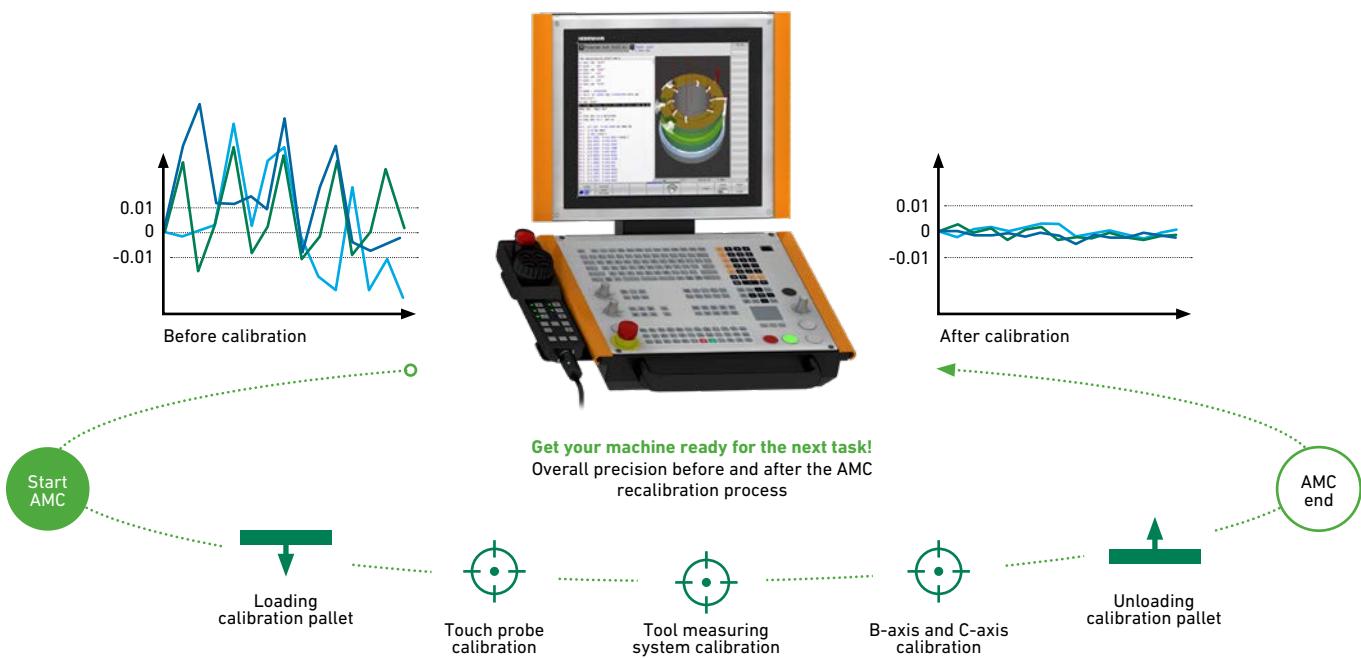

AMC highlights

- Dialogue-guided software for easy and fast handling
- Get a consistent calibration process.
- Recover overall machine precision—every time
- Increase operator availability.
- Reduce human error in data management.

Automated Machine Calibration (AMC)

Take your machine to the highest precision—anytime

Calibrate your Milling machine in minutes, not hours. Reduce your downtime between cycles with GF Machining Solutions' standard Automated Machine Calibration (AMC). Calibrating your machine to ensure the stable, long-term precision required for high-quality parts is now as easy as pushing a button.

Turning. Roughing. Finishing. One clamping operation.

Quick and precise

Complete machining on the Mikron MILL P 800 U ST quickly produces more accurate workpieces. Unnecessary rechucking results in a more precise runout, faster workpiece handling and setup time.

Most compact

Reduced investment and operating costs, thanks to space-saving, complete machining center.

Perfect Automation

Optimal integration into production thanks to various Automation solutions compatible with the Mikron MILL P 800 U series either from the front or from the back.

Quality

Simultaneous turning allows a permanent positioning of the tool in its optimal cutting position, perpendicular to the work piece surface. This ensures the best precision and surface quality.

Productivity

Automated pallet handling without restriction of access to work area.

The pallet changer passes through the machine.

Production service package

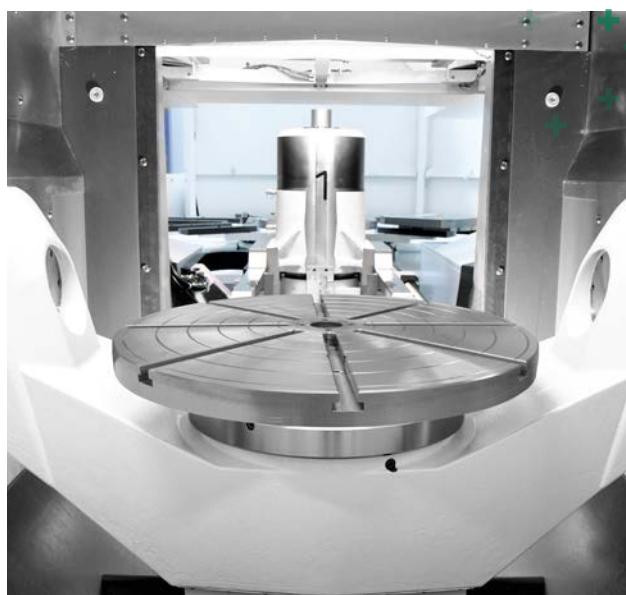

Specific services and maintenance options are to be considered for this solution, in relation to safety and continuous operation matters.

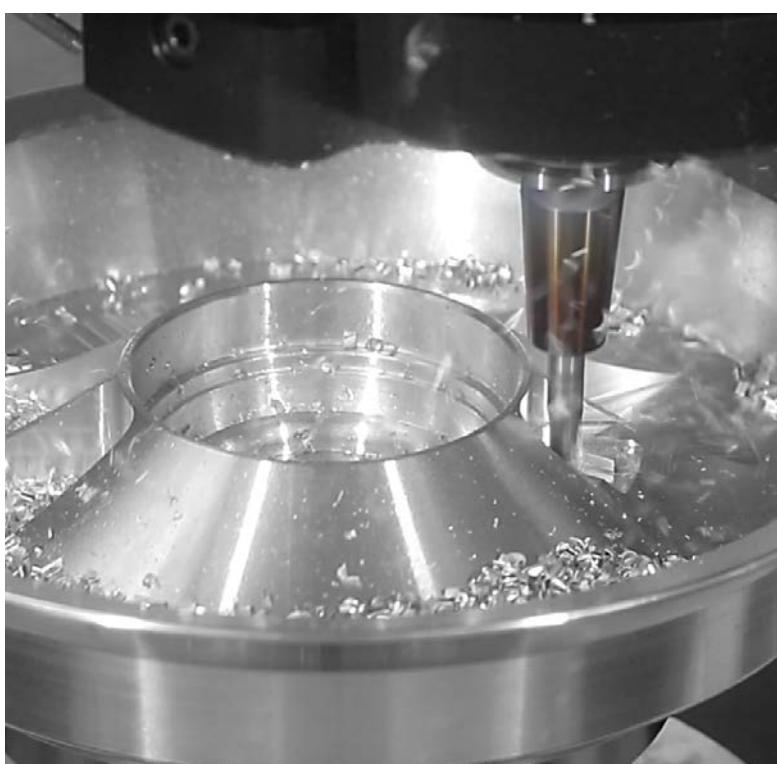

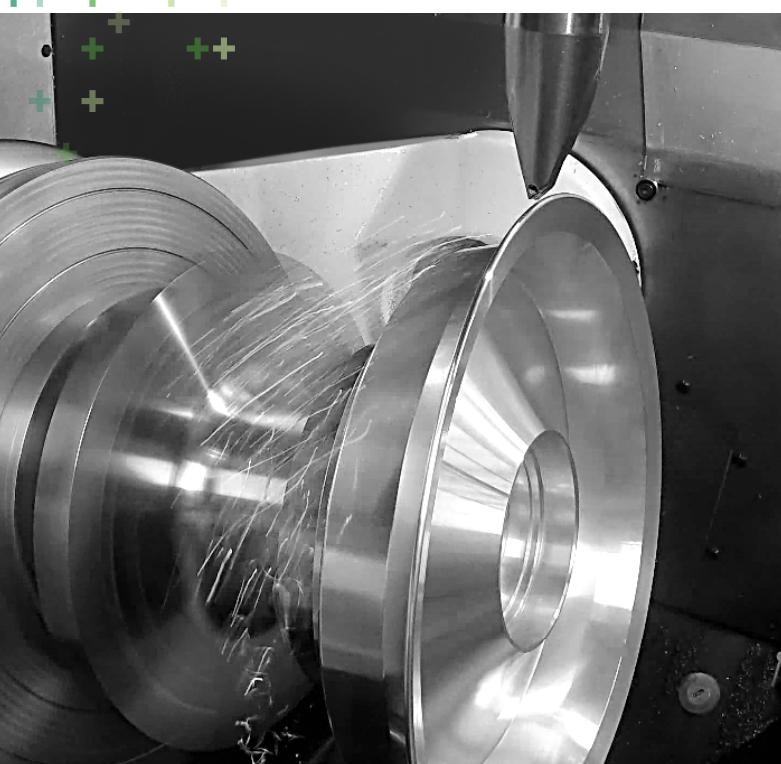

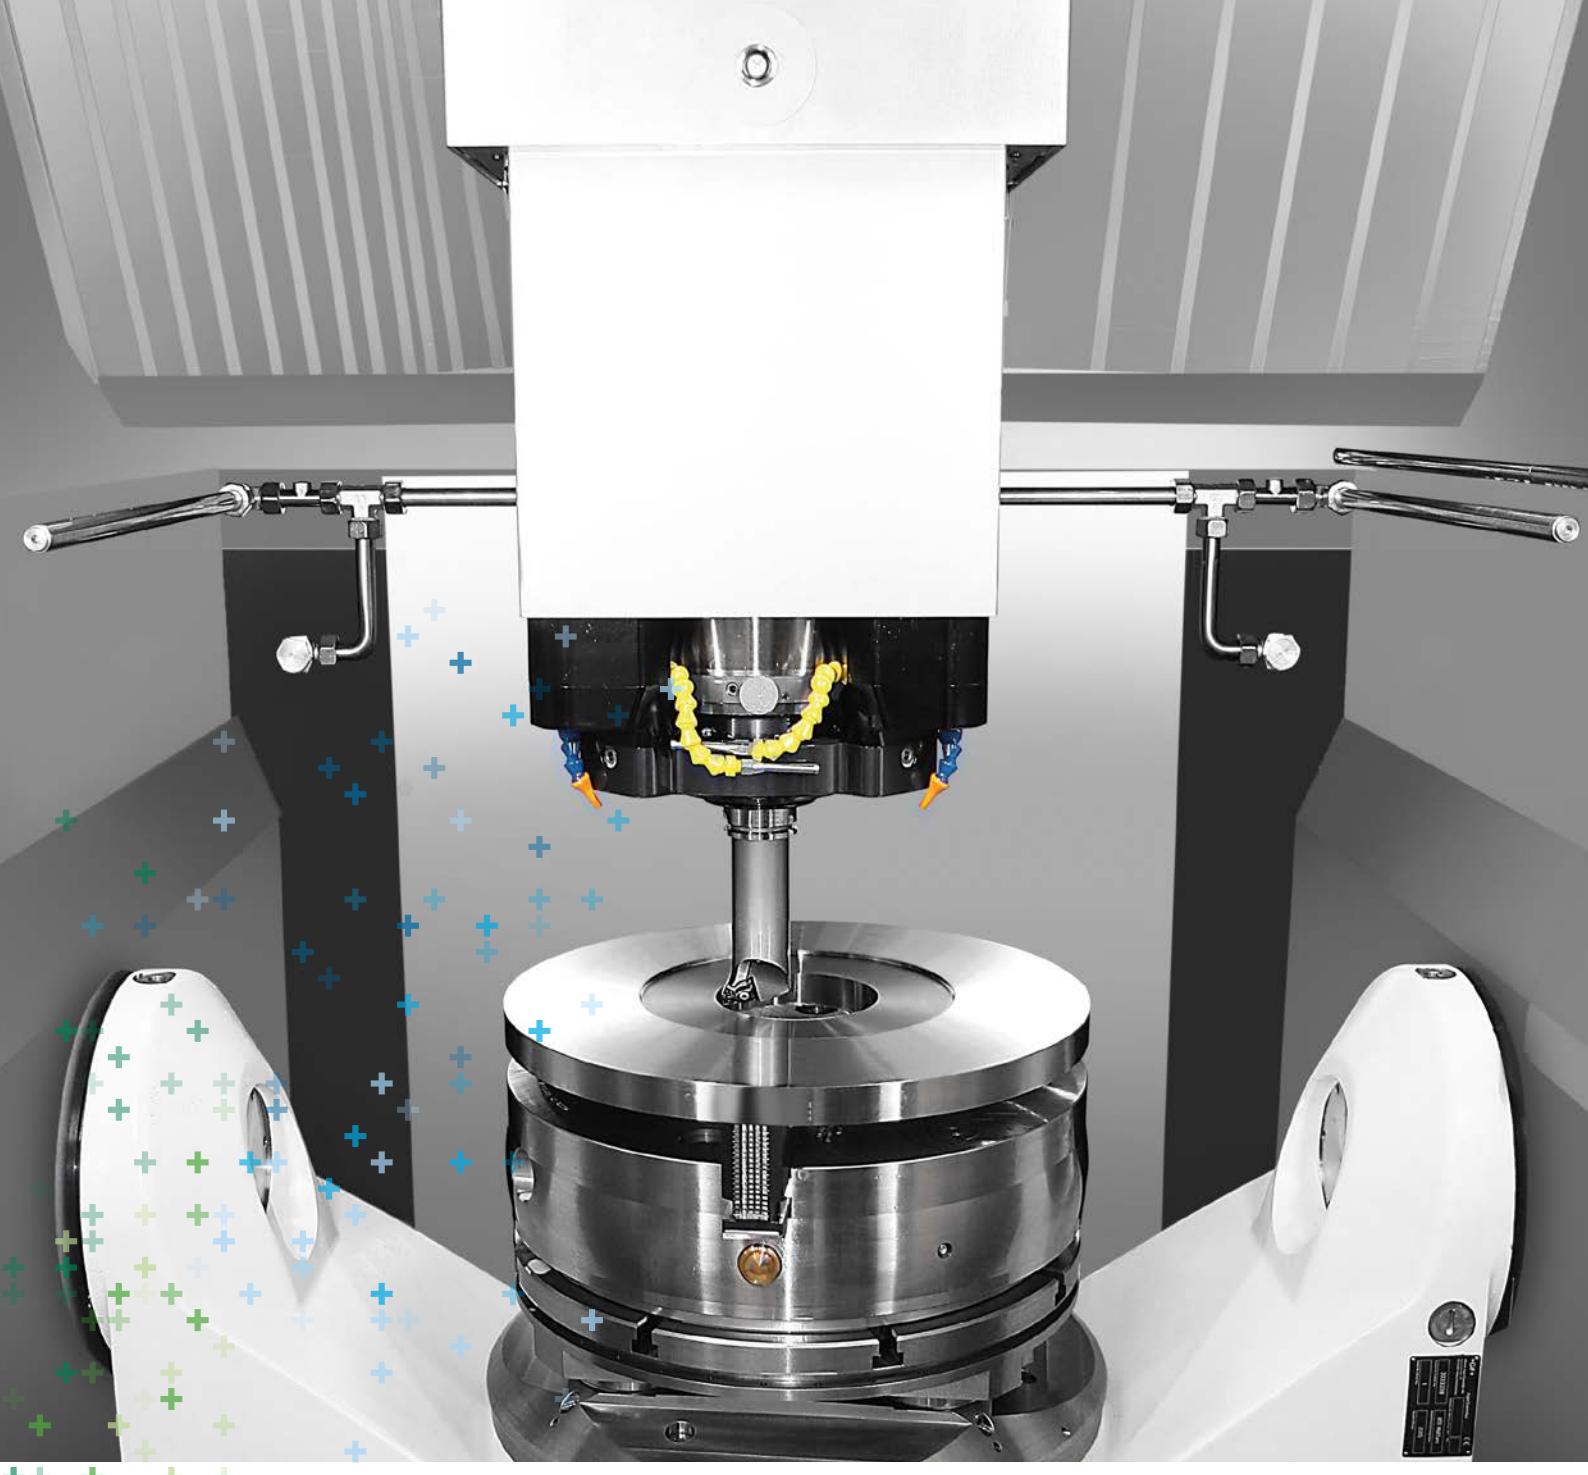

Ask us.

Visit our website: www.gfms.com

Complete and automated simultaneous machining in one setup

- Meet challenging requirements in an easier and faster manner: Reduce your setup hurdle by more than 50% and convert it into billable production time
- Reduce your cost: Rough faster by turning while achieving savings on tool cost with a ratio of 1/100
- No compromise on process productivity and precision: Our safe enclosure does not impact the axis motion performance: 1.7g all the way!

Options

Geared up for a multitude of options

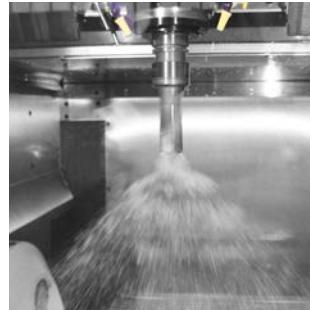

Infrared touch probe

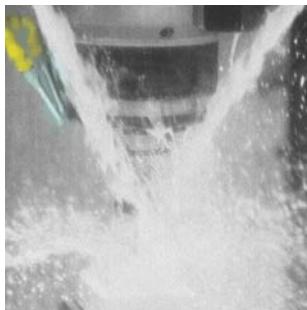

Laser measuring system

Minimum quantity cooling lubrication

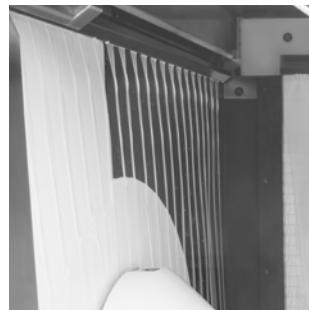

Through-Spindle cooling

System 3R - Pallet and tool management software

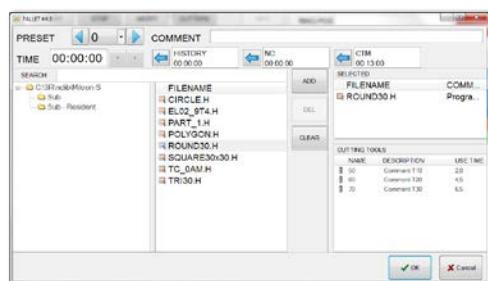

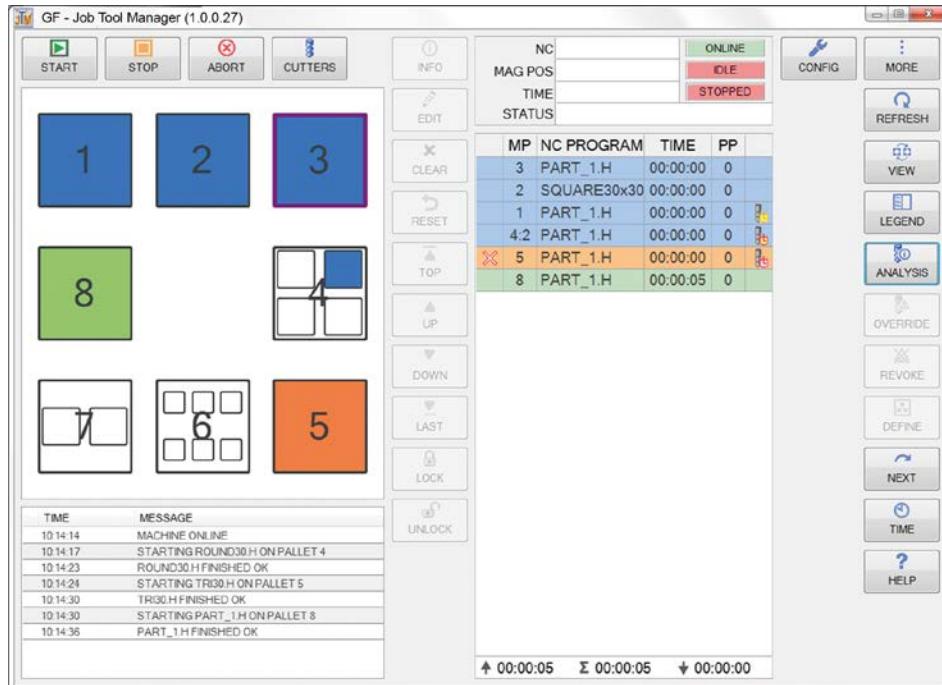

JTM JobToolManager

User friendly software for one machine with integrated pallet changer.

Assign NC programs to pallet position by drag and drop on a touch screen, close to the pallet changer.

Advantages

- + Easy to change priorities when the machine is working
- + Add or remove jobs while machining
- + Jobs where cutters are missing will not be started
- + Estimated and present machining time for the magazine content are calculated.

Assign NC file, check tool capacity, schedule

By selecting the NC program, JobToolManager registers the tools used in the program.

Time is stored if the NC program defines the time for the entire machining or if each tool has its use time.

If the program has been used earlier, it automatically displays the last recorded time.

Manage tools upon jobs to be done

Each time a new job is started, JobToolManager checks the machine tool table to see the availability of tools. If a tool is broken and no sister tool is available, will the job be blocked.

Customer Services

New digital service possibilities

GF Machining Solutions Customer Services continues to push technological boundaries to deliver the future of services to you—today.

rConnect is the digital services platform available for all GF Machining Solutions technologies. Following a modular approach, rConnect comprises a range of services that empower you to increase your manufacturing productivity. Certified with the TÜViT Trusted Product Certificate.

rConnect Messenger, we deliver machine data to your mobile device to keep you constantly informed about your production. You can supervise your workshop from your smartphone.

rConnect Live Remote Assistance (LRA), our expert engineers rapidly respond to your service requests. LRA allows effective face-to-face assistance using audio, video, chat and many more functionalities.

About GF Machining Solutions

Multi-technology solutions provider

Our commitment to you and your specific applications is proven by the value-adding intelligence, productivity and quality delivered by our multi-technology solutions. Your success is our chief motivator. That's why we are continuously advancing our legendary technical expertise. Wherever you are, whatever your market segment and whatever the size of your operation, we have the complete solutions and the customer-centric commitment to accelerate your success—today.

EDM (Electrical Discharge Machining)

Wire-cutting EDM

GF Machining Solutions' wire-cutting EDM is fast, precise and increasingly energy efficient. From ultraprecise machining of miniaturized components down to 0.02 mm to powerful solutions for demanding high-speed machining with respect to surface accuracy, our wire EDM solutions position you for success.

Die-sinking EDM

GF Machining Solutions is revolutionizing die-sinking EDM with features like iGAP technology to dramatically boost machining speed and reduce electrode wear. All of our die-sinking systems offer fast removal and deliver mirror finishes of Ra 0.1 µm (4 µin).

Hole-drilling EDM

GF Machining Solutions' robust hole-drilling EDM solutions enable you to drill holes in electrically conductive materials at a very high speed—and, with a five-axis configuration, at any angle on a workpiece with an inclined surface.

Tooling and Automation

Tooling

Our customers experience complete autonomy while maintaining extreme accuracy, thanks to our highly accurate System 3R reference systems for holding and positioning electrodes and work pieces. All types of machines can easily be linked, which reduces set-up times and enables a seamless transfer of workpieces between different operations.

Automation

Together with System 3R, we also provide scalable and cost-effective Automation solutions for simple, single machine cells or complex, multi-process cells, tailored to your needs.

Milling

Milling

Precision tool and mold manufacturers enjoy a competitive edge with our Mikron MILL S solutions' fast and precise machining. The Mikron MILL P machines achieve above-average productivity thanks to their high performance and Automation. Customers seeking fastest return on investment benefit from the affordable efficiency of our MILL E solutions.

High Performance Airfoil Machining

Our Liechti turnkey solutions enable the highly dynamic manufacturing of precision airfoils. Thanks to the unique performance and our expertise in airfoil machining, you increase productivity by producing at the lowest cost per part.

Spindles

As part of GF Machining Solutions, Step-Tec is engaged in the very first stage of each machining center development project. Compact design combined with excellent thermal and geometric repeatability ensure the perfect integration of this core component into the machine tool.

Software

Digitalization solutions

To drive its digital transformation, GF Machining Solutions acquired symmedia GmbH, a company specialized in software for machine connectivity. Together, we offer a complete range of Industry 4.0 solutions across all industries. The future requires the agility to adapt quickly to continual digital processes. Our intelligent manufacturing offers embedded expertise, optimized production processes, and workshop Automation: solutions for smart and connected machines.

Advanced manufacturing

Laser texturing

Aesthetic and functional texturing is easy and infinitely repeatable with our digitized Laser technology. Even complex 3D geometries, including precision parts, are textured, engraved, microstructured, marked and labeled.

Laser micromachining

GF Machining Solutions offers the industry's most complete line of Laser micromachining platforms optimized for small, high-precision features to meet the increasing need for smaller, smarter parts to support today's leading-edge products.

Laser Additive Manufacturing (AM)

GF Machining Solutions and 3D Systems, a leading global provider of additive manufacturing solutions and the pioneer of 3D printing, have partnered to introduce new metal 3D printing solutions that enable manufacturers to produce complex metal parts more efficiently.

Service + Success

We take you to new heights

Our Success Packs are designed to maximise your return on investment and empower you in your quest for success across all industrial segments. Our subscription packs feature a comprehensive range of services that guarantee the access and support you need to get the most out of your assets today, while preparing for the challenges of tomorrow. Our trusted experts backed by our latest cutting-edge, intelligent Digital Solutions, provide a full range of services.

eCatalog

Keep your equipment operating at peak precision and performance with our wide range of certified consumables and original wear parts. Our online catalog has it all (ecatalog.gfms.com).
